» Company Profile

» Main Business

Founded in 1999, Jinhua Yuxin Chemical Fiber Co., Ltd. is a modern enterprise deeply engaged in the textile and chemical fiber industry, integrating research and development, production, and sales. Equipped with internationally advanced texturing machines and air-jet covering machines, the company specializes in manufacturing eco-friendly colored polyester/nylon DTY, air-covered yarn and AB yarn. With an annual output exceeding 25,000 tons, our high-quality products are exported to over 20 countries and regions across the globe.

» Strategic Location

Strategically located in Jinyi New Area, the core hub of the Yangtze River Delta Economic Belt, the company enjoys unparalleled advantages:

- North: Adjacent to Yiwu International Trade City ("World's Supermarket")
 - East: Linked to Ningbo-Zhoushan Port (the world's largest port by cargo throughput)
 - Transportation: At the intersection of Hukun Expressway (G60) and Yongjin Expressway (G1512), forming a "Zhejiang Manufacturing - Yiwu Trade - Ningbo Shipping" golden triangle logistics network.
- This geography enables a global supply chain system that ensures high efficiency from production to worldwide distribution.

» Philosophy & Vision

Guided by our core philosophy of "Customer-Centric, Quality-Driven", we drive continuous innovation in both technology and quality control to empower our clients' business success. We extend our sincere invitation to partners worldwide to visit our manufacturing centers and explore mutually rewarding collaborations.

AB Yarn <small>Bicomponent Composite Yarn</small>		
Hybrid Material/Color Composition	Synergistic Performance Enhancement	High-configuration Customization
Through precise control of dual-component structure (A+B), we achieve innovative fusion of materials and colors, delivering fabrics with distinctive textures, three-dimensional layering, and reversible dual-tone effects.	Combining complementary properties like moisture-wicking + quick-drying, elasticity + rigidity, and antibacterial + UV-resistant capabilities, this technology breaks single-material limitations to create functional textiles with "1+1>2" synergies.	Supporting customizable blend ratios (50/50, 70/30), broad denier range (30D-500D), and flexible blending methods, the system ensures design uniqueness without compromising production stability.
