TOPS

1. Making good quality all the time for every customers, keeping steady quality for every shipment, especially making accurate color for each shipment. While customer requires us to adjust the character or function of fiber we can follow flexible too.

2. Advising customer which type of fiber is most suitable for them and which type of fiber is most economically for them. There's many types of fiber, also different customers have different machines, different technicians team, different finished products and different market, we believe our value is to respect these differences and serve all customers's special requirement accurately and professionally, backing on our advanced machines, excellent product experts and globe experience from 17 countries. The right fiber is the best for customers, we always believe.

3. Helping customers to decrease their cost of raw materials, while the quality of their finished products is same or better. We're trying our best to develop technology of dope dyed fiber so that they can use dope dyed fiber instead of dying fiber, dying cost has been very high and it will be higher for there's too much pollution in dying. Also we try our best to protect the environment with all our partners while we don't increase cost in products by dope dyed fiber with higher quality, which can replace dying.

4. Developing better technology and better products for all our customers so that they can develop better finished products or finished products with special function according to their markets. So that we can grow together for the future. Only if customers tell us his plan, we'll develop right raw materials for them accordingly.
